

*"As part of a world leading group in the energy and telecoms industry, we work hard to develop strong partnerships that help us deliver large scale cabling projects. Our commitment to Quality – whether in relation to systems, partners or processes is second to none – and working with DCL Security was an excellent fit."*

**Jack Torrens, Quality Manager**

## Prysmian Group

### Security services on a grand scale.

Whitelee Windfarm is the UK's largest onshore windfarm located just 20 minutes from central Glasgow on Eaglesham Moor. With 215 turbines generating up to 539 megawatts of electricity – enough to power almost 300,000 homes – the site has more than 130 km of trails as well as an onsite visitor centre.

### Working in Partnership.

When Scottish Power appointed Prysmian Cables, the UK's largest domestic cable manufacturer, to take on the mammoth task of laying power cables to power the wind turbines, Prysmian needed the support of a specialist security team. Having worked with DCL Security on other sites providing Security Guards and Keyholding services, Prysmian were confident they could trust the DCL team to deliver the level of tight security that the Whitelee windfarm project demanded. Determined to complete the project as safely and securely as possible, the DCL team was able to support Prysmian by providing Security Guards, an onsite Security Supervisor and vehicle patrol of the huge site.

*"It was essential that we found a Security partner who had the flexibility and control of a skilled team of Security Guards, a company who could increase the size of the onsite security team when it was required. DCL Security was able to provide the number of guards we needed exactly when we needed them – we had as many as 24 Security Guards onsite at one stage."*

**Callum Cooper, Contracts Manager**
